INTRODUCTION:

Gardening is very interesting branch of botany which deals with various aspects of plants like landscape gardening, growing of indoor plants, bonsai making, terrarium (bottle garden), flower arrangements etc. For getting knowledge of these branches of gardening in addition to the theoretical information practical or hands-on experience is more useful to the students. Lecture and Demonstration No.1: Shri. Sanjeev Walawalkar (Landscape gardening and Bonsai)

-The first lecture has been delivered by Shri. Sanjeev Walawalkar on Landscape gardening and Bonsai. He has explained various aspects of gardening. He has explained following principles.

Principles of Landscaping:It is very difficult to lay down principles of landscaping, applicable everywhere.

However, he has told the general principles of landscaping as follows:

(i) The ideal landscape garden is like ideal landscape painting which expresses some single thought or feelings. Its expression may be gay, bold, retired, quiet, etc.(ii) Beauty and utility should be harmoniously combined.(iii) Area should be divided into different parts and plan should be conceived for each area. Overall plan should be such that the observer catches the entire effect and purpose of the plan without stopping to analyze its parts.(iv)Let the garden and building merge into each other. There should not be stopping abruptly particularly in front of building. The view of garden from the windows and doors should be very attractive. Planting around the building, climbers against wall and on the porch, decoration of verandah and rooms with attractive foliage, flowering plants, hanging baskets serve to unique the building with garden. Every part of the compound should be planned in such a way that it gives surprising effect to visitor.(v) Simplicity of design should be aimed at which helps in the execution of the plan.(vi)An ideal landscape should have open space.(vii) Over crowding of plants and object should be avoided.

He has also explained various aspects of Bonsai preparation. He has explained the materials required for bonsai preparation like Bonsai pots, Soil, fertilizers required etc.

Lecture and Demonstration No.1: Shri. Sanjeev Walawalkar(Landscape gardening and Bonsai)

Lecture and DemonstrationNo.2: Dr. Manjushree Phadake and Mrs. Neha Kulkarni (Terrarium) –Dr. Manjushree Phadake and Mrs. Neha Kulkarni have together explained various styles of Bonsai making and Terrarium preparation along with the demonstration.

Lecture and Demonstration No.2: Dr. Manjushree Phadake and Mrs. Neha Kulkarni (Terrarium)

They have explained following points.

Bonsai is an art of dwarfing trees and perennial shrubs. A bonsai is not just a dwarfed plant, but it should depict all the characteristics of an age-old tree in its full glory. It is not at all difficult to dwarf a tree or a shrub. But, skill is needed in making it a mini replica of a giant tree with all its glory and ruggedness,

Choosing plants: Any of local, perennial trees or shrubs, preferably with tiny or smaller leaves can be chosen. These days a number of exotic foreign plants too are available for bonsai. Imli, Vilayati Imli (Manila tamarind), Indian coral

tree, Bottle brush tree, Parkinsonia, Casuarina, Persian lilac, Sandpaper tree, varieties of Ficus, Guaiacum and Baobab tree some of the trees which are suitable for bonsai. Malpighia, Kamini, Serissa, Lantana, Galphimia, Duranta, Calliandra, Bougainvillea, Carmona, Ravenia, Schefflers, Aralia, Portulacaria (Jade plants) and Adenium are some of the suitable shrubs.

Containers: Earthen or ceramic containers are most useful. The pot should have its mouth larger than its base. Containers with constricted mouths should not be used, as changing soil and root pruning in these pots is difficult.

Soil Mixture: A small quantity of sand, vermiculite, rice husk or brick granules are used in the soil mixture; it will remain porous for longer periods. The porosity in soil aerates the soil; thus promoting healthy root growth and also facilitates faster drainage.

Implements: Secateurs, small poker for loosening soil, pliers or a wire cutter, watering can with a fine sprinkler and a spray pump (optional).

Materials: Good garden soil, farmyard manure, nylon netting, moss and copper wires of 20, 18 and 16 gauge. (Sand/vermiculite/rice husk optional).

How to get plants: Visit the nurseries to find a good source of healthy plants. Plants bought from a nursery will save you the time, as they will be already grown up. Alternately, one may grow the plants from seeds, by cuttings, or by layering / grafting / budding.

Useful hints: If you buy a plant from a nursery and if the plant is too big to be accommodated in the chosen bonsai pot, then first do partial pruning of branches and roots. Repot the plant in a slightly smaller pot. Allow it to stabilize. After this, branch and root pruning can be done again for repotting in an even smaller pot.

Pruning and Pinching: Pruning of branches is done either to shorten a branch or to eliminate it. Pinching is done to encourage side shoots to grow and thus to make it grow dense. Branch pruning and pinching alone is responsible mainly in dwarfing of the plant.

Root Pruning: A potted plant can be dwarfed without pruning its roots.

To accommodate a plant in a smaller pot, it becomes necessary to prune some of the roots.

Shaping: To bend and twist the branches to a desired shape, following processes are followed. Tying, wiring and tilting. Tying is a process in which branches are tied down or up and secured to a support to get the desired effect. In wiring, soft copper or aluminium wires are wound around a stem in a helical manner. After wires are wound, the branches could be bent to a desired form. The process of bending them should be done gradually. After the branch has acquired the desired shape (After a few months) the wires are removed.

Dr. Manjushree Phadakehas explained the technique of making the “Terrarium” or Bottle Garden. It is a technique in which miniature plants are grown in broad mouth glass bottles. She explained choose only those plants, which tolerate shade and humid atmosphere. The plants chosen also should be slow growing; as fast growing plants will need frequent pruning; for which opening of the bottle frequently will be needed. Keep the bottle near the window, where it will get bright diffused light. Hot sunlight must be avoided. If exposed to harsh sunlight, plants will literally get cooked inside the bottle. Following plants are suitable for the bottle gardens. Fittonia, Episcia, Miniature varieties of Aglaonema, Ferns, Cryptanthus, Pilea, Pellionia and Peperomia.

INTRODUCTION:

Gardening is very interesting branch of botany which deals with various aspects of plants like landscape gardening, growing of indoor plants, bonsai making, terrarium (bottle garden), flower arrangements etc. For getting knowledge of these branches of gardening in addition to the theoretical information practical or hands-on experience is more useful to the students. Practical knowledge of these skills may be helpful to students to start a small scale business or to perform in their own houses.

Keeping in mind the department of Botany has organized one day workshop on various aspects of gardening like Landscape Gardening, Bonsai, Flower Arrangements and Terrariums on **30/12/2019**. Experts from various gardening branches are invited to deliver their expertise in the workshop. Shri. Sanjeev Walawalkar (Landscape gardening), Dr. Manjushree Phadake and Mrs. Neha Kulkarni (Terrarium), Mrs. Mrunal Natekar (Flower Arrangement) from an NGO named "HIRVAL" are invited for their demonstrations with the natural materials.

The inauguration of the function has been made by the auspicious hands of Principal. Dr. Milind Hujare Sir. After the inauguration the workshop is followed with the lecture by Shri. Lecture and Demonstration No.1: Shri. Sanjeev Walawalkar (Landscape gardening and Bonsai)

-The first lecture has been delivered by Shri. Sanjeev Walawalkar on Landscape gardening and Bonsai. He has explained various aspects of gardening. He has explained following principles.

Principles of Landscaping:It is very difficult to lay down principles of landscaping, applicable everywhere.

However, he has told the general principles of landscaping as follows:

(i) The ideal landscape garden is like ideal landscape painting which expresses some single thought or feelings. Its expression may be gay, bold, retired, quiet, etc.(ii) Beauty and utility should be harmoniously combined.(iii) Area should be divided into different parts and plan should be conceived for each area. Overall plan should be such that the observer catches the entire effect and purpose of the plan without stopping to analyze its parts.(iv)Let the garden and building merge into each other. There should not be stopping abruptly particularly in front of building. The view of garden from the windows and doors should be very attractive. Planting around the building, climbers against wall and on the porch, decoration of verandah and rooms with attractive foliage, flowering plants, hanging baskets serve to unique the building with garden. Every part of the compound should be planned in such a way that it gives surprising effect to visitor.(v) Simplicity of design should be aimed at which helps in the execution of the plan.(vi)An ideal landscape should have open space.(vii) Over crowding of plants and object should be avoided.

He has also explained various aspects of Bonsai preparation. He has explained the materials required for bonsai preparation like Bonsai pots, Soil, fertilizers required etc.

Lecture and Demonstration No.1: Shri. Sanjeev Walawalkar(Landscape gardening and Bonsai)

Lecture and DemonstrationNo.2: Dr. Manjushree Phadake and Mrs. Neha Kulkarni (Terrarium) –Dr. Manjushree Phadake and Mrs. Neha Kulkarni have together explained various styles of Bonsai making and Terrarium preparation along with the demonstration.

Lecture and Demonstration No.2: Dr. Manjushree Phadake and Mrs. Neha Kulkarni (Terrarium)

They have explained following points.

Bonsai is an art of dwarfing trees and perennial shrubs. A bonsai is not just a dwarfed plant, but it should depict all the characteristics of an age-old tree in its full glory. It is not at all difficult to dwarf a tree or a shrub. But, skill is needed in making it a mini replica of a giant tree with all its glory and ruggedness,

Choosing plants: Any of local, perennial trees or shrubs, preferably with tiny or smaller leaves can be chosen. These days a number of exotic foreign plants too are available for bonsai. Imli, Vilayati Imli (Manila tamarind), Indian coral

tree, Bottle brush tree, Parkinsonia, Casuarina, Persian lilac, Sandpaper tree, varieties of Ficus, Guaiacum and Baobab tree some of the trees which are suitable for bonsai. Malpighia, Kamini, Serissa, Lantana, Galphimia, Duranta, Calliandra, Bougainvillea, Carmona, Ravenia, Schefflers, Aralia, Portulacaria (Jade plants) and Adenium are some of the suitable shrubs.

Containers: Earthen or ceramic containers are most useful. The pot should have its mouth larger than its base. Containers with constricted mouths should not be used, as changing soil and root pruning in these pots is difficult.

Soil Mixture: A small quantity of sand, vermiculite, rice husk or brick granules are used in the soil mixture; it will remain porous for longer periods. The porosity in soil aerates the soil; thus promoting healthy root growth and also facilitates faster drainage.

Implements: Secateurs, small poker for loosening soil, pliers or a wire cutter, watering can with a fine sprinkler and a spray pump (optional).

Materials: Good garden soil, farmyard manure, nylon netting, moss and copper wires of 20, 18 and 16 gauge. (Sand/vermiculite/rice husk optional).

How to get plants: Visit the nurseries to find a good source of healthy plants. Plants bought from a nursery will save you the time, as they will be already grown up. Alternately, one may grow the plants from seeds, by cuttings, or by layering / grafting / budding.

Useful hints: If you buy a plant from a nursery and if the plant is too big to be accommodated in the chosen bonsai pot, then first do partial pruning of branches and roots. Repot the plant in a slightly smaller pot. Allow it to stabilize. After this, branch and root pruning can be done again for repotting in an even smaller pot.

Pruning and Pinching: Pruning of branches is done either to shorten a branch or to eliminate it. Pinching is done to encourage side shoots to grow and thus to make it grow dense. Branch pruning and pinching alone is responsible mainly in dwarfing of the plant.

Root Pruning: A potted plant can be dwarfed without pruning its roots.

To accommodate a plant in a smaller pot, it becomes necessary to prune some of the roots.

Shaping: To bend and twist the branches to a desired shape, following processes are followed. Tying, wiring and tilting. Tying is a process in which branches are tied down or up and secured to a support to get the desired effect. In wiring, soft copper or aluminium wires are wound around a stem in a helical manner. After wires are wound, the branches could be bent to a desired form. The process of bending them should be done gradually. After the branch has acquired the desired shape (After a few months) the wires are removed.

Dr. Manjushree Phadakehas explained the technique of making the “Terrarium” or Bottle Garden. It is a technique in which miniature plants are grown in broad mouth glass bottles. She explained choose only those plants, which tolerate shade and humid atmosphere. The plants chosen also should be slow growing; as fast growing plants will need frequent pruning; for which opening of the bottle frequently will be needed. Keep the bottle near the window, where it will get bright diffused light. Hot sunlight must be avoided. If exposed to harsh sunlight, plants will literally get cooked inside the bottle. Following plants are suitable for the bottle gardens. Fittonia, Episcia, Miniature varieties of Aglaonema, Ferns, Cryptanthus, Pilea, Pellionia and Peperomia.
