**INTRODUCTION:**

The decomposition or stabilization of organic matter by the action of microorganism has been taking place in nature since life first appeared on earth. "Composting" means attempt to control and directly utilize the natural process for sanitary disposal and reclamation of organic waste material. The final product of composting is called "compost".

Vermicomposting truly is nature's great disappearing act. Vermiculture is the part of environmental biotechnology. Environmental biotechnology aims for bioconversion of organic wastes into resources which leads to protect the environment from getting polluted. Environmental biotechnology involves harnessing diverse desired species and strains of bacteria to convert organic wastes to value added products.

All animals are bioreactors of some kind, because they regulate the temperature, moisture, pH level of their own bodies to ensure their own survival. The main task is now to find an animal whose bioreactor functions correspond to the conditions that suit aerobic bacteria and such suitable animal which is easily available is the Earthworm. The Earthworm are known to inhabit the earth's soil since the Precambrian period about 600 million years ago. Charles Darwin (1881) first studied the role of Earthworms in breaking down of dead plant and animal residues because of their great importance in soil improvement. As early as 384 -322 B.C. the famous Greek philosopher Aristotle described Earthworms as "the intestine of earth". The gut of an Earthworm is a perfect natural bioreactor, which provides an ideal home for aerobic bacteria. Garbage's in which earthworm lives is not a Garbage for him but it is a habitat which he needs for getting nutritious food. Earthworms feed on bacteria present in organic matter (soil).

In 1985 Maharashtra Agricultural Bioteks, an organization that has initiated both commercial and educational ventures was formed and established a small plant to manufacture Vermicompost from agricultural waste. The organization currently produces 5000 tones of Vermicompost annually. In 1991 - 1992 Maharashtra Bioteks and the India department of Science and Technology promoted the adoption of Vermicompost technology in 13 States in India. The group has also established a Vermicompost unit with Chitrakoot Gramodaya University Madhya Pradesh which produces five tons of Vermicompost per month. Educational Institutes in Maharashtra and other states have started conducting Certificate/Diploma/Regular courses on vermiculture, vermiculture biotechnology and vermiculture and vermicompost technology. The duration of courses from 10 days to 6 months. The Department of zoology of P. D. V. P. Mahavidyalaya Tasgaon, Dist. Sangli, running six weeks (One and half months) "Vermicomposting Biotechnology" course.

**Aims and Objectives-**

1. To get the knowledge of composting.
2. Students will create their own business.
3. Students can generate employments in organic fertilizer companies.
4. The students having own farms will turn towards organic farming.
5. Vermicompost technology will help to maintain the environment pollution free.
6. The course will help to get the knowledge of diversity of local earthworm species.
7. To convert unwanted organic matter particularly plant leaves , garbage and paper into fertile soil.
