Career Oriented Course,

9 August, 2020

To,
The Principal,
P D V P College,
Tasgaon- 416 312.

With reference to above subject, our college is going to start a certificate course entitled " Advanced Data Science" for B.SC. PART-I,II&III (Computer students) in this current academic year. So, I request you to kindly give me permission to commencement above said course.

Please consider the same and oblige.

Thanking you

Prin. Dr. Millind S. Hujare
Principal

Padmabhustian Dr. Variantraodada Patil
Mahavdyoloja, Tasgaon (Gengil).

Paper No.1 **Advanced Data Science** (Theory)

Marks:50

Course Syllabus

Course outcomes:

1. Introduce major deep learning algorithms, the problem settings, and their applications to solve real world problems.

2. Identify the deep learning algorithms which are more appropriate for various types of learning

tasks in various domains.

3. Implement deep learning algorithms and solve real-world problems.

Unit-I

Numerical Computation: Overflow and Underflow, Poor Conditioning, Gradient-Based Optimization, Constrained Optimization, Stochastic Gradient Descent Deep Networks: Challenges Motivating Deep Learning, Deep Feedforward Networks, Example: Learning XOR, Gradient-Based Learning, Hidden Units, Architecture Design, Back-Propagation and Other Differentiation Algorithms

Unit-II

Regularization for Deep Learning: Parameter Norm Penalties, Norm Penalties as Constrained Optimization, Regularization and Under-Constrained Problems, Dataset Augmentation, Noise Robustness, Semi-Supervised Learning, Multi-Task Learning, Early Stopping, Parameter Tying and Parameter Sharing, Sparse Representations, Bagging and Other Ensemble Methods, Dropout, Adversarial Training, Tangent Distance, Tangent Prop, and Manifold Tangent Classifier

Unit-III

Optimization for Training Deep Models: How Learning Differs from Pure Optimization, Challenges in Neural Network Optimization, Basic Algorithms, Parameter Initialization Strategies, Algorithms with Adaptive Learning Rates, Approximate Second-Order Methods, Optimization Strategies and Meta-Algorithms

Unit-IV

Convolutional Networks: The Convolution Operation, Motivation, Pooling, Convolution and Pooling as an Infinitely Strong Prior, Variants of the Basic Convolution Function, Structured Outputs, Data Types, Efficient Convolution Algorithms, Random or Unsupervised Features, The Neuroscientific Basis for Convolutional Networks.

QUESTION PAPER Data Science

Marks:50

	Q 1) Choose Correct Alternative and rewrite it(one mark for each) [8 marks]
-	Data science is the process of diverse set of data through?
4	A. organizing data
1	B. processing data
1	C. analysing data
1	D. All of the above
-	2. The modem conception of data science as an independent discipline is sometimes attributed to?
	ACCORDANGE CONTRACTOR

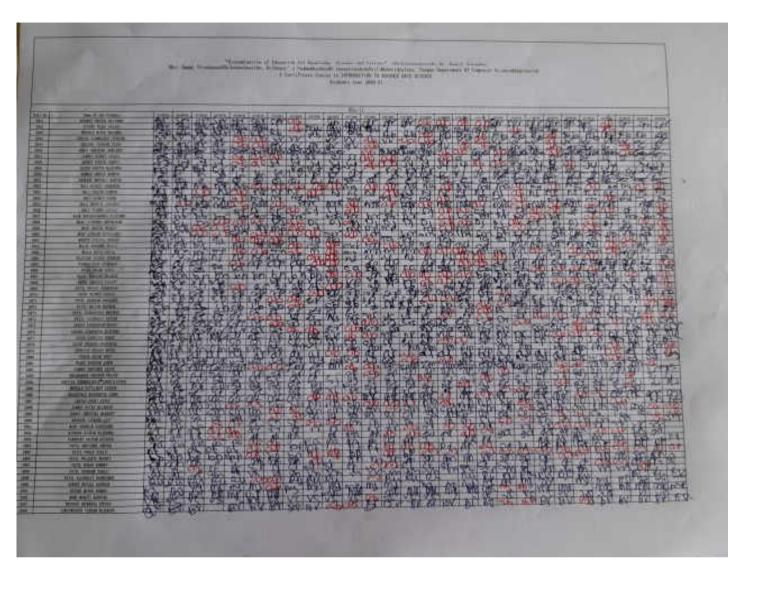

- A. William S.
- B. John McCarthy
- C. Arthur Samuel
- D. Satoshi Nakamoto
- 3. Which of the following language is used in Data science?
- A. C
- B. C++
- C.R
- D. Ruby
- 4. What is the work of Data Architect?
- A. utilize large data sets to gather information that meets their company's needs
- B. work with businesses to determine the best usage of the information yielded from data
- C build data solutions that are optimized for performance and design applications
- D. All of the above
- 5. Which of the following is not a part of data science process?
- A. Discovery
- B. Model Planning
- C. Communication Building
- D. Operationalize

6. Which of the following are the Data Sources in data science?	
A. Structured	
B. UnStructured	
C. Both A and B	
D. None Of the above	
7. Which of the following is correct skills for a Data Scientist?	
A. Probability & Statistics	
B. Machine Learning / Deep Learning	
C. Data Wrangling	
D. All of the above	
8. Which of the following is one of the key data science skills?	
A. Statistics	
B. Machine Learning	
C. Data Visualization	
D. All of the above	
Q 2) Attempt any two out of three questions(Each 10 marks)	[20 marks]
1) Explain Stochastic Gradient Deep network?	
2) Explain semi supervised leaning in regularization for deep learing?	
3) Explain Neuroscientific basis for convolution network?	
Q.3) Attempt any four out of six questions?	
1) Explain challenges in neural network optimization?	
2) where do we use the concept of multitasking?	
3) what is gradient descent algorithm with example?	

4) Explain deep feedforward network?
5) what is meta algorithm?

02 Stochastic Gradient Deep Detwork! a) The word 'Stochastic' means a system or a process that is linked with a random probability Hen in Stochostic Gradient Descent Free samples are selected randomly instead of the whole data set for each iteration. In Gradiens descent, there is a term called "batch" which denotes the total number of samples from a dataset that is used for calculating the gradient for each iteration In typical Gradiera descent optimization, like Batch Gradient descent the batch is taken to be the whole dataset Although , using the whole dataset is really exected too getting to the minimal in a less I less random manner, but the problem arises when our datesets gets Suppose, you have a million Samples in your dataset, so if you use a typical gradier descent optimization to technique, you will have to use all of the one million samples for Completing one ituation while performing the gradient descent , & it has to be done for every iteration centil the minima is reached Hince, it becomes Computationally Very expensive to perform = This problem is solved by Stochastic aradisal Descent . In Sab, it was only a single Sample, i.e., a botch size of an to pertorm each iteration; The sample

panel shows a decision boundary wie might adopt after Seeing only one positive (with circle) one negative (black circle) example the bottom panel shows a decision boundary we might adopt is , in addition to the two labeled examples, his exist given a collection of unlabiled data (gray circles). The cloud could be viewed as personming flustering of their labeling the clusters of them labeling with the labeled data, pushing the decision boundary away toom high-density regions, or learning an underlying one dimensional mainifold where the data

Unlabeled data, when used in conju small amount of labeled data, can produce considerable improve ment in learning accuracy. The acqui Sition of labeled data for a learning problem often requires a skilled humbon agent or a physical experiment The cost associated with the labeling process thus may render large, fully labeled training instasible, whereas organisation of unta beled data is relatively inexpensive In Such Situations, Semi-Supervised learning can of great practical Value - Somi Supervised learning to also of theoretical interest machine learning & as a model for human learning

(hallenge) Of Neural Network Optimization:

1) III - Conditioning of the hessian
Even when aprimizing convex functions are

one problem is an ill conditioned hessian

matilx, H: - very general problem in optimezation. Convex or not. * Result of III - Conditioning: - causes SGD to be Stuck : even Very Small Steps cause increased in cost turbation el Local Menemo . In conver optimization, problem is one of finding a local minimum - . Some convex functions have a flat region rather than a global minimum pothst 3) Model Identifiability: - Model is idervisiable it large training sample set can be rule out all but one Setting of parameters? · Even if a nedral net has uncountable no of minima, they are equivalent Of COST Gradient Descent: Gradient descent is an optimization algorithm for finding a local minimum of a differentiable function you Start by defining the Inttal parameters values of from there gradient descent uses calculus to iteratively adjust the values so they minimize the given cost function steps of gradient descent: Following the mountain example, we will call agent as the blinded person In each position, the agent only knows two things . the gradient (for that position, or parameters) & the width of the Step to take (learning rate). With that information

DATE the current value of each parameter is updated with the new parameter Values, the gradient is re-calculated & the process is repeated until reach convergence local minima Let's revise how the gradient descent algorithm works at each step. Repeat unit hit convergence 1) given the gradient, Calculate the Change in the parameters with the learning rate 2) Re-calculate the new gradiend with the new value of the parameter 3) Repeat Step 1 Here is the formula of gradient descent algorithm Repeat unit! convergence & Oj & Oj & S tig- Goodford Descend algorithm Hidden Units: -In neural networks, a hidden layer is located between the input & output of the algorithm, in which the function applied weight to the inputs & directs them through an activation function as the owput In Short, the hidden layers perform nonlinear transformations of the inputs entered into the network Hidden layers vary depe nding on the function of the layer may depending on their associated weight Each of the hidden units is a Squashed linear function of its inputs - Neural network of this type can have as inputs any real

numbers as output . For regression, typical too the output units to be linear Function of their inputs Meta Algorithms: The term "meta algorithm " hava fairly reall - accepted meaning in the contact of learning theory withich is the field of research formed subject mul liplicative veights originates the contest learning theory is an algorithm that decided how to whate of set of other Ctypically , through not hecasonily non-man " algorithms " (which might be as domb as a constant owput, for example). & constructs a new algorithm out of those soften by combining or Weighting the outputs or the component algorithm . Typically those composnx algorithms are viewed as Black - boxes. taking input & producing their output with the Just a Few examples of metal algorithms that I can think at get the moment Multiplicative layer rieighted moderity Boosting Bagging ensembre averaging, voling Follow the leader
