Dr. Meghnad Joshi delivered lecture on Stem cell and their Clinical importance. **Stem cells are cells with the potential to develop into many different types of cells in the body.** They serve as a repair system for the body. There are two main types of stem cells namely embryonic stem cells and adult stem cells.

Stem cells are different from other cells in the body in three ways:

1. They can divide and renew themselves over a long time.
2. They are unspecialized, so they cannot do specific functions in the body.
3. They have the potential to become specialized cells, such as muscle cells, blood cells and brain cells.

The stem cells are used in Tissue regeneration, cardiovascular disease, treatment of Brain disease, treatment Cell deficiency therapy & Blood disease treatments and also use adult hematopoietic stem cells to treat diseases, such as leukemia, sickle cell anemia, and other immunodeficiency problems.

Dr. Meghnad Joshi said that stem cell therapy is important for old age persons. Old age persons facing the problems like joint pain, arthritis, loss of memory etc. the stem cells are largely used for cure of these diseases by stem cells.

Lastly vote of thanks expressed by Dr. Alka Patil, Dr. P. B. Teli, Mr. Yogesh Andoji, Mr. V. M. Jadhav, P. S. Bhandare, Miss. S. V. Pakhare, Miss K. B. Kumbhar, Mr. Yogesh Andoji. Miss. S. S.
